When no flooding occurs, include miscellaneous river conditions, such as significant rises, record low stages, ice conditions, snow cover, droughts, and hydrologic products issued (WSOM E-41).

☒ No flood stages were reached in this HSA for the month above.

Although no river flooding occurred in the San Angelo HSA in November, it was still a relatively wet month. Most of the rainfall events of the month were widespread light rain events that lasted for several hours. A strong cold front moved across the HSA on November 23, producing a squall line with heavy rainfall, sleet, and a few inches of snow over the area. A flash flood warning was issued for Tom Green County for this event, but no major flooding was reported. San Angelo and surrounding areas received around an inch and a half of rain with this storm. A widespread rainfall event occurred on November 29th, resulting in another one to two inches over most of the HSA.

For the month of November, the San Angelo airport received 3.35 inches of rain, which is 2.27 inches above normal. The yearly rainfall total is now 22.45 inches, which is 2.79 inches above normal. For Abilene, the November rainfall total was 2.44 inches, or 0.96 inch above normal. For the year, Abilene has received 28.96 inches of rain, which is 5.59 inches above normal. Although the year started out dry, the heavy rainfall amounts over the last few months has resulted in above normal yearly totals over much of the HSA.
